Claim Rejections - 35 USC § 102

Page 2

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-5, 7, 9, 11, 13, 15 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Kawai et al (Japanese Patent Publication JP-08029202).

Regarding claims 1, 2, 5, 9, 15 and 17, Kawai et al shows in Figs. 1 and 7 a source of electromagnetic radiation (30), a detector (40) for sensing electromagnetic radiation; and an element (2 in Fig.7) located in a path between the source and the detector, wherein the element comprises a plurality of areas (21-23 in Fig.7; 7-9 in Fig.5) having respectively different electromagnetic radiation reflection characteristics for reflecting respective different amounts of electromagnetic radiation from the source to the detector, wherein the areas are arranged to provide a directionally unique sequence of transmission characteristics along the path traced on rotation of the rotatable member.

Regarding claims 3 and 4, Kawai et al shows in Fig.2 an optical head (4) comprising a source (30) and a detector (40) is located for rotation with a rotatable member (in Fig.2, elements 2-4 are coupled via a shaft).

Regarding claim 7, Kawai et al shows in Figs.3 and 5 a rotatable member (2) is movable in an axis perpendicular to a plane of rotation of the rotatable member.

Regarding claim 11, Kawai et al shows in Figs. 5 and 7 partially transparent surfaces.

Regarding claim 13, the limitation therein is shown in Fig.7.

Claim Rejections - 35 USC § 103

Page 3

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a parameter.

such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the

manner in which the invention was made.

4. Claims 14, 16, 18 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Yamada (6,351,657) in view of Kawai et al.

Regarding claims 14 and 16, Yamada differs from the claimed invention in that its device

utilizes a mechanical encoder, as opposed to the claimed invention that utilizes an optical

encoder comprising an optical source and detector. However, it would have been obvious to one

of ordinary skill in the art to modify the device of Yamada by replacing a mechanical encoder

with an optical encoder of Kawai et al for the purpose of lengthening the lifespan of elements by

optical contactless operation.

Regarding claims 16 and 19, Yamada shows in Fig.6 a display and a rotatable member

(1a) are located on a front face of a device.

5. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kawai et al in

view of Extance (EP 0210825).

Regarding claim 6, although the areas shown in Fig.7 of Kawai et al are not arranged in a

repeating sequence, it would have been obvious to one of ordinary skill in the art to arrange the

areas of Kawai et al in a repeating sequence manner as taught by Extance, in view of the desire

Art Unit: 2878

to achieve the more effective performance of detecting the direction of the movement of an optical disc.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin Pyo whose telephone number is (571) 272-2445. The examiner can normally be reached on Mon-Fri (with flexible hour), First Mon. off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Georgia Y. Epps can be reached on (571) 272-2328. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
